Hi All,

Could someone please suggest how I refer to those double tilde(~) symbols on the y-axis which indicate a break in the continuity of the scale? for example, as you read up the y-axis units, one might see: 0, 1, 2, 3, 4 double (~), 17, 18, 19, 20 (a log scale wouldn't show the fine detail of data in both areas.)

Is this possible to do with IDL?

thanks!

bg
