Subject: changing axis scale
Posted by u2s5thmember on Tue, 17 Feb 2004 23:06:51 GMT

Hi All,

Could someone please suggest how I refer to those double tilde(~)
symbols on the y-axis which indicate a break in the continuity of the
scale? for example, as you read up the y-axis units, one might see:
0, 1, 2, 3, 4 double (~), 17, 18, 19, 20 (a log scale wouldn't show
the fine detail of data in both areas.)

Is this possible to do with IDL?

thanks!
bg
