Subject: Re: Something similar to a "Widget_Container" ?
Posted by Antonio Santiago on Thu, 26 Feb 2004 18:01:48 GMT

(First of all, sorry about my poor english)

Sorry, but i didnt want to say that you could understand in my last message.

I mean about a widget like gtk_box in GTK+ libraries.
That is, I define a widget with an "invisible table", and then i put
other widget inside this at different possition.

Example:
"boxtable" of 3x2 positions. Then i put on boxtable[1,2] a button and on
position boxtable[0,1] another widget or another boxtable.

Well, i am just finished a possible usefull thing like that, if for
someone can be usefull i will happy. Well, i will happy instead it's not :)

Bye.
