Subject: Statistic codes: Significance level

Dear all:

I am processing some long term time series of various data.
I computed the long term trends using the REGRESS fuction.
However, I need to also give the significance level of the
trends. I have been looking around for a code to do it but
have not found anything.

Has anybody done similar calculation? Is there a function or
procedure I can use for that purpose?

Thanks for any help and suggestion,

Andry
