Dear All,

I have the following very trivial question I would like to put forward:

How do I insert some blank space between a 'widget_droplist' and a 'widget_button' ?

I have tried adding the keyword 'ynozero' to the 'widget_button', but it didn't do the trick.

This is the (bad) code I have:

...
...
...

;Top base widget

w_top = widget_base(title = 'TOP', mbar = w_menu, /column)

;First row

w_row1 = widget_base(w_top, /row)

;Column 1

w_c1 = widget_base(w_row1, /column, /frame)

w_c1l = widget_label(w_c1, /align_center, value = 'COLUMN 1')

;Column 2

w_c2 = widget_base(w_row1, /column, /frame)

w_c2l = widget_label(w_c2, /align_center, value = 'COLUMN 2')

;Column 3

w_c3 = widget_base(w_row1, /column, /frame)

w_op1 = widget_droplist(w_c3, value = op1_att, title= 'OPTION 1', \$
 uvalue = 'op1_sel')

w_op2 = widget_droplist(w_c3, value = op2_att, title= 'OPTION 2', \$
 uvalue = 'op2_sel')

w_op3 = widget_droplist(w_c3, value = op3_att, title= 'OPTION 3', \$
 uvalue = 'op3_sel')

w_op4 = widget_droplist(w_c3, value = op4_att, title= 'OPTION 4', \$
 uvalue = 'op4_sel')

;**** THIS IS WHERE I WANT TO INSERT SOME 5 CM OF SPACE ****

```
w_go = widget_button(w_c3, value = 'GO AND DO THE STUFF', $  
                    uvalue = 'go')
```

```
;Column 4, on-screen images
```

```
w_c4 = widget_base(w_row1, /column, /frame)
```

```
w_c4l = widget_label(w_c4, /align_center, value = 'COLUMN 4')
```

```
...
```

```
...
```

```
...
```

I am working with the following IDL version -

```
IDL>print, !version
```

```
{x86 linux unix linux 6.0.1 Aug 15 2003  32  64}
```

I hope this 'code pasting' is helpful and not too confusing !

Sorry for wasting your time and thanks in advance for your help.

Best Regards and hasta luego,

Pepe
