: Have you tried reads?

:

: a = 0.d0 & b = 0.d0 & c = 0.d0

: reads,'9.32323 24323.233 22.124235555d-14',a,b,c

: print,c,b,a

The code that I posted uses `reads'. The problem is that you have to determine how many floats the string is composed of and then allocate an array of that size.
