Hi,

Currently I am working on a postprocessor program in IDL reading HDF5 files. Everything was alright when I was using version 1.4.5 of the HDF5 to link against my program, which is producing the HDF5 file. However I recently upgraded to 1.6.2. Since then the IDL routines do not recognize any datasets anymore (it still does groups and the file itself). The version of the HDF in IDL is 1.4.3.

Is there a way to fix this problem, e.g. but upgrading IDL's HDF5 libraries or in creating the file in the other program, using the latest version.

Thanks for any help
