
Subject: Exporting files in a multibands file

Hi all,

I have opened files (same dimension and type) that are stored in memory in ENVI.

I would like now to export all these layers inside a unique file in the following formats:

- ENVI_BIL
- GEOTIFF
- ERDAS
- ER_MAPPER

Exporting is done in batch mode ie. I am not using the graphical interface.

I am using ENVI_OUTPUT_TO_EXTERNAL_FORMAT with respectively
/ENVI
/TIFF
/ERDAS
/ERMAPPER

and FID = arrays of my file identifiers
POS = lndgen(number of Bands)

Any suggestions why this does not work and copy the first layer into all the bands.

Regards,

Cinthia
