I should think something like this would work:

```
Read_JPEG, filepath('rose.jpg', Subdir=['examples', 'data']), rose
r = reform(rose[0, *, *])
g = reform(rose[1, *, *])
b = reform(rose[2, *, *])
Color_Convert, r, g, b, h, s, v, /RGB_HSV
TV, BytScl(h)
```

Cheers,

David
