Hope this is not too basic a question, but none of my "graphics" periodicals has a reference for me: Does anyone know if PV-WAVE or IDL comes in an IBM-PC version and if so, about how much does it cost? We have a need to get some data handling and image processing capability into the field and it seems that 386/486 PC's should be able to handle the requirements...now for the software. Thanks. Keith Horton
