Hi,there

Here's my question: I have set up a widget base and layout. There's a
button,But_A, in that widget base. For it,I creat a event handler, pro_A.

What I'm wishing to do is when I click the button and the event handler is
called, I will create another widget in the widget base I set up before.

How can I realize it ,or is it possible?

Thanks a lot.
