
Subject: Problems with IDL 6.0 on Red Hat Enterprise Linux

Hey folks,

We just installed IDL 6.0 on a Dell box running Red Hat Enterprise Linux (Intel 32-bit):

```
$ uname -a
Linux xxxx 2.4.21-9.0.1.ELsmp #1 SMP Mon Feb 9 22:26:51 EST 2004 i686 i686
i386 GNU/Linux
```

However I get the following error when I try and start the IDL demo:

```
% Embedded IDL: Research Systems, Inc., IDL Demo.
% Restored file: DEMO.
% Error loading sharable executable.
  Symbol: IDL_Load, File =
/usr/local/rsi/idl_6.0/bin/bin.linux.x86/idl_xmlsax.so
  libstdc++-libc6.2-2.so.3: cannot open shared object file: No such file or
directory
% Error occurred at: DEMOOBJ__DEFINE
%          OBJ_NEW
%          DEMO
%          $MAIN$
% Execution halted at: $MAIN$
```

Does anyone have any suggestions? I thought I'd try the group before I contact RSI.

Cheers,
Liam.
