Well, then I guess I'm back to improper naming.
But, it's not your fault. Blame those SOBs you
got that code from! :-)

Compile the programs from your project. Then type
this:

```
IDL> Help, /Source
```

Examine the list (it will probably be a long one) to
see where these files are. Take them out of whatever
file they are in and name them correctly. Shouldn't
take more than a day or two. :-)

Cheers,

David
