Subject: compiling itools and utilities
Posted by Nuno Oliveira on Tue, 23 Mar 2004 12:19:06 GMT

I'm trying to make a .sav file from which I can call some itools and utilities. I add the corresponding .pro files (in the case, xvolume.pro and ivolume.pro) to a project that I build (and that includes /resolve all). But when I try to run it, I get an error, because he needs all the procedures that itools and utilities call, like the ones related to creation of objects.

Do I need to compile explicitly all the procedures that are associated to itools? Or there is another way to get itools on a .sav file to call from virtual machine?

Cheers,

Nuno.
