Hi,

using read_tiff I Read an image into a variable lets say pixel interleaved (channels, columns, rows)

now I need the number of columns and the number of rows

like that:

```
img = READ_TIFF(file)
```

```
num_col = ?(img[1])
```

```
num_rows= ?(img[2])
```

I tried SIZE(img,/Dimensions) which returns: 3, 385, 345

very nice! I need only the Number "385" and the "345" respectively

Do you understand what I want to say?

Thanks

Tom
