Hi! I have a question, any comments will be welcome!½

I have to create an image with 1, 2, 3, 4 or 5 bands. When I have all the 5 bands, I can write:

```
Image=[(Band1),(Band2),(Band3),(Band4),(Band5)]
```

However, in the case I don't have all the bands, like only 2, 3 and 5, I should put:

```
Image=[(Band2),(Band3),(Band5)]
```

Then, I would have to write several combinations to make that automatically. That's the problem! Isn't there anything easier? How can I modify the initial script in the case I don't have all the bands??

Thanks!

Cheers,

Julio
