Hi all,

how can I add and IDL library (taken somewhere from the web) to the standard path of my IDL distribution, so that each time I call a procedure/function that is in the library, IDL automatically find it? Do I have to put such library in some directory? where? (I use linux).

Just a drop. I have got the new IDL version, but the "old" online help doesn't work anymore :-(Is it right???

Only that nasty and NON user-friendly acrobat manual ...

Cheers,
S.
