Check the FAQ first.

Sorry, I forgot to say that I am running IDL3.6.1a on Sun/Solaris2.3.

Anyway, here's what I did:

Whenever I invoke IDL I execute a shell which includes this line:

```
xrdb -merge /usr/local/lib/app-defaults/idl.Xdefaults
```

The contents of that file is just this:

```
Idl.colors:    -5  
Idl*threeD:    TRUE  
Idl*background: PeachPuff2  
Idl*scale:     10
```
