Hi,

the following piece of code:

```
> pro test
>   y = testfunc( title=10, title1=20 )
> end
>
> function testfunc, title=t, title1=t1
>   print, t, t1
>   return, 0
> end
```

results in the error message (IDL6.0):

% Ambiguous keyword abbreviation: TITLE.

I don't see any ambiguity here. May I consider this a  
(design-)bug, or is there some deeper meaning to this behaviour?

Regards

Oliver
