> free_lun, u
> free_lun, u

Initially my code was like following:

```
openw, u, file1, /get_lun  
... write stuff  
close, u  
free_lun, u
```

```
openw, u, file2, /get_lun  
... write stuff  
close, u  
free_lun, u
```

The file2 was left opened.

I've changed it to the following:

```
openw, u, file1, /get_lun  
... write stuff  
close, u
```

```
openw, u, file2  
... write stuff  
free_lun, u
```

And now everything works fine.
