
Subject: set default set of sub-bands in `envi_select`

Is there a way to have `envi_select` come up with a default set of bands instead of all of them? I have an application where the user is selecting a subset of bands to do 'pc_rotate' on. The user almost always chooses the same subset of bands, so I'd like to have `envi_select` come up with those bands selected by default. I would rather not use `envi_get_slice`, because the user may choose another subset. I just want to have the common subset of bands pre-selected by default.

Thanks.
