
Subject: IDL doesn't close files.

I create a text file in IDL using openw, write some text to it, then
close it using
close, u, /force
free_lun, u, /force

Then, when I try to open it in a text editor (I use the FAR manager's
internal editor) it says that is unable to open it because of sharing
violation.

What should I do to close just created file without exiting IDL?
