Hi,

Anyone know if there are similar IDL functions to compute the k factor for one-sided tolerance intervals?

The equations are:

$$k1 = (z(1-p) + \sqrt{z(1-p)^2 - a*b})/a$$

where

$$a = 1 - (z(1-\gamma))^2 / (2(N-1)) \text{ and } b = z(1-p)^2 - z(1-\gamma)^2 / N$$

Specifically, I'm looking for IDL functions to return $z(1-p)$ and $z(1-\gamma)$ for probability p and probability γ .

Please reply to newsgroup or to [reddvl03-news@yahoo.deletethis.com](mailto:redddl03-news@yahoo.deletethis.com).

Thanks.
