Hello Everyone,

I am using IDL 6.0 VM and having problems running the .sav file on it. I am able to run the same code on IDL runtime environment. So, I am unable to figure out the problem in running the same on IDL VM. We are running the code on Unix platform.

Below is the listing of the error messages I get when I try to run any .sav file.

```
idl -vm=./gemplex.sav
IDL Version 6.0 (linux x86 m32). (c) 2003, Research Systems, Inc.
Installation number: 209353.
Licensed for use by: Florida International University
```

```
% Attempt to call undefined procedure/function: 'IDLVMMAIN'.
% Execution halted at: $MAIN$
```

Any kind of help would be appreciated.

Thanks!

Paresh Gupta
