
Subject: Creating transparent image overlay

Hi, IDL Users -

I'm looking for a way to make a transparent image overlay _without_ having to go through the slow process of combining images. I've been through all the graphics functions. What I want is to show DST where SRC is 0, and SRC otherwise, where DST is what's already displayed and SRC is the image overlay.

I could easily use the WHERE function to create a new, combined image, then display that, but it's pretty slow. Any ideas?

Thanks,
