Does any one have an IDL algorithm to unpack this vector

`v0=[0 1 2 3 0 4 5 1 0 2 3 4 0 5 1 2 0 3 4 5]`

in the following way:

`v1=[0 0 0 0 0]`

`v2=[1 2 3 4 5 1 2 3 4 5 1 2 3 4 5]`

Thanks,

Tmorri
