
Subject: IDL Ignoring CTRL-C under SunOS

I have a feeling something similar was aksed recently about another OS. We have just upgraded from IDL 3.5.1 to 3.6.1, running under SunOS 4.1.3.

I have an IDL application using windows and widgets and I used to be able to quite easily break into it using CTRL-C (and moving the pointer over an IDL widget).

Now it seems to take the IDL session ages to respond - if at all.

Is there an easy fix to this?

Tim
