You could use ENVI_GET_PROJECTION to get the lat/lon of pixel (1,1), and the pixel size, then figure from there. Or you could feed ENVI_CONVERT_FILE_COORDINATES a big array of image indices. Write the results to a file (two bands, one for lat, one for lon), create a header using ENVI_SETUP_HEAD, and you're good to go. Let me know if you need more detail.

Chris
