I thought that making a call\_external was different from making a DLM.  
In any case, HELP,/DLM gets me a lot of descriptions like

**\*\* CDF - IDL CDF support (not loaded)**

Version: 2.6r7, Build Date: JUN 27 2003, Source: Research Systems,  
Inc.

Path: /Applications/idl\_6.0/bin/bin.darwin.ppc/idl\_cdf.so

but no mention of my little homemade .so file.

I have learned that .full\_reset\_session clears the old .so file, but I  
wonder if there is a sneaky software switch I can flip, short of  
nuking everything with .full\_reset\_session.
