Subject: Contour Plotting
Posted by jeffwax1 on Wed, 09 Jun 2004 18:26:06 GMT

Hey, thanks for all your help beefore. I actually ended up going with a different route, but my plot is working now. My new issue is the interpolation between the points. I'm using CONTOUR, but it's interpolations seem wrong. It's putting huge peaks and valleys where there aren't even data points. Anyway, I was just wondering if there is a newer, better function for interpolation than CONTOUR. Also, I'm working on IDL 5.3 and I was wondering if IDL 6.0 would be better. Is it worth my time to do the upgrade?

Thanks for your help,

Jeff
