
Subject: Super/sub-script in widget program?

Hello,

I am currently working on a program that will allow users to choose spectral lines from a catalogue based on several selection parameters. One parameter will be the molecular species.

I would like to display the molecules as normally as possible in a field of 38 checkboxes. One issue with this will be getting subscripts into the molecular formulae (and superscripts when I'm dealing with isotopes). So, does anyone know if superscripts or subscripts can be used with label widgets? If not, are there any suggestions for how I might make this look nice?

Thanks,
Ian
