Hi, Rob.

I modified XOBJVIEW to do this. You can see how I did it in code and notes given (via links) in http://www.paulsorenson.com/underthehood.html . See...

METHOD: PCSexObjViewWid::ReCreateWidgets .

Dick Jackson gave me lots of suggestions and examples for that part.

Hmmm. Should that method name be spelled "Re-CreateWidgets", with a hyphen? What would my English teachers say :-0
