Subject: Q: !p.multi - changing the plotting order

With !p.multi=[0,3,4,0,0] for example, IDL draws 4 panels in
the first row, then goes down to the next row. Can IDL draw
3 panels in the first column, then 2nd, 3rd, 4th columns?
This can be down by manually defining the positions but
I wonder if there is a built-in solution.

Thanks
