
Subject: Motley MGH_NCDF_SAVE problem

Hey guys,

I am trying to use one of the procedures in Mark's Motley library, but running into some problems. I want to use the MGH_NCDF_SAVE utility program to save some of my structures to NetCDF files. However, when running the command I see a lovely variable undefined error.

```
% Variable is undefined: SZ.  
% Execution halted at: MGH_NCDF_SAVE    115  
  <path to the library>/motley/mgh_ncdf_save.pro
```

After looking at mgh_ncdf_save.pro, the variable SZ does not exist anywhere else in the file. I am just learning about NetCDF and this Motley library, so I really haven't spent the time to try to figure out what was really intended on this line. I was wondering if anyone else out there uses this utility program and/or has run into the same problem before and what needs to be done to fix it.

The library can be downloaded from here:
<http://www.dfanning.com/hadfield/idl/README.html>

Thanks,
Mike
