Hi all,

I have been trying to download IDL 6 for Linux since the last few days with no luck. Does anyone know where I could download it? I have already asked for a CD but it's quite urgent.

We have been using IDL 6 for window but my research group needs a machine under Linux and we need to try our softwares under IDL.

Thanks for your help.

Fil.

P.S: I will guess than the licence under linux is the same than under windows?
