Humm. Yes, I see. I think I have heard of this before, but it doesn't act this way in the Windows version I am using (6.03). Hard to say if it is an IDL version problem or a Windows/X Windows problem. I wonder if you could pass null string values to the combobox when you initialize it so that it gets set to some reasonable size initially? As you added items, you could delete blank items. Ugly, though, even if it worked. :-)

Cheers,

David
