I define the combobox as such:

```
dataSets = [info.fileList(0)]
droplist2 = WIDGET_COMBOBOX(controlPanel, Value = dataSets, $
UVALUE='select', /DYNAMIC_RESIZE)
```

I added the /DYNAMIC_RESIZE keyword in an attempt to fix this issues but it made no difference to the dropdown part.

Initially the combobox always contains just one element, and then more are added as the user loads files using the line:

```
Widget_Control, state.dlist, COMBOBOX_ADDITEM=filename
```

But when you add another item the dropdown list still only displays one option at a time with really tiny scrollbars on the side. Thanks for your time.
