Hi,

I got a random effect using convolution:

---

```
imagetest=indgen(256,256,224)
ker=indgen(1,3,5)
r1=convol(double(imagetest),double(ker),/edge_truncate)
r2=convol(double(imagetest),double(ker),/edge_truncate)
r3=convol(double(imagetest),double(ker),/edge_truncate)
print, max(abs(r1-r2))
print, max(abs(r1-r3))
print, max(abs(r2-r3))
end
```

---

The first time, I got

```
IDL> .GO
85.961538
793.00000
768.00000
```

and the second time:

```
IDL> .GO
793.00000
793.00000
0.0000000
```

And all results should be zero... I suspect a memory effect but how ?

Emmanuel Christophe
