Subject: RESOLVE_ALL

I've found some unexpected/undocumented behaviour when I run resolve
all. (IDL 5.1 and 6.0)

If I do the following steps

1) compile .pro files
2) change directory using IDLs cd procedure
3) complile some other .pro files
4) run resolve_all

It seems that changing directory is not a good idea when I wish to run
resolve_all. The easy way around it is to ensure that all files are in
the IDL_PATH and thus avoid the need for changing directory altogether.

The bug is rather trivial but worthy of a post. If you follow David
Fannings tips/advice this should never happen to you.

Cheers,
Robbie
