Subject: Re: IDL code to read MSU and HIRS in Level1b
Posted by Yamout on Fri, 20 Aug 2004 17:24:08 GMT

Dear Stockwell,

thank you very much for your posting.
I am illiterate PC user who has been programing since Comodore 64 with
audio tapes. My first PC code was in FORTRAN in an Olivetti 8084 (I
think so). Since then I have discovered how stupid I am, as I write some
codes or architecture some more stupid excutables (in some cases even
with GUI) in C# or more convenient in C++. IDL with all of its
advantages (or perhaps also disadvantages) is a complete new world for
me. I am trying to understand it since IDL 5.1 and have always discover
more and more about the sense of its use.
It would be a nominal experience for such IDL users like me to discover
more about the IDL society and their publicity.
Hope I have not caused a wasted weekend for you.
Yours
Hossein
