Hey Dave,

I have been told that "soon" means soonish. :)

RSI has assured me that they are working on support for writing HDF5
files and that effort would be directed towards this project after 6.1
shipped and the dust settled a bit.

Now plans do change but I would hope that a final version would be
released before the end of the year.

Cross your fingers.

-Rick

P.S. I thought you left the world of IDL ;)
