Hello, I just have one comment....

If I use your suggestion:

```
Scale3, xr=[Min(Vx), Max(Vx)], $  
        yr=[Min(Vy), Max(Vy)], $  
        zr=[Min(Vz), Max(Vz)], $  
        AX=50, AZ=50
```

My output window will only show a piece of the whole data.

On the other hand using the geographic coordinate system shows it all.

I was wondering why did you think that was going to be more fruitful?

Should I change something else besides this?

Kind Regards,

Mary T.
