Hello,
I would like to know how to select all the files within my current
folder that are named differently as:
1_10top.out
50_10top.out
100_10top.out
200_10top..............1000_10top.out

I think it should be something like this, but how can I fill out the
'???' part?

FOR k=0,11 DO BEGIN
  filename = '??????'+'_10top'+'.out'

Kind Regards,

Adhara
