Subject: Hot key using in Xmanager V2.0
Posted by mpub on Thu, 02 Sep 2004 07:17:55 GMT

Dear All:

I am using Xmanager V2.0 to connect the remote redhat linux server.

But most hot key of emacs I can not use because they are hooked by windows.

And when I use some software with command line enable. I can not use DEL, BACKSPACE, any arrows in the command line editing.

Does anyone like to give me any advice and hit for these kind of problems?

Thanks in advance.
