
Subject: Irregularly Lat Lon Grid: Displaying Land Types

Hello all,

I have vegetation type data (Integer 1-13) on a 12km grid and would like to display it on a map. I don't want to contour the data but rather just display the grid boxes colored according to the vegetation class. I can't use map_image (not a regular lat/lon grid). Any ideas or suggestions will be greatly appreciated.
