Hello All,

Having been dropped into the Linux world after a
VMS upbringing, I'm now in love with the KATE editor.

Alas the existing online syntax highlighting file dated from IDL v5.3

I've updated this to IDL v6.1, with all the Object and
iTool commands too! The file has gone from 465 lines to
over 1800 lines.

I've submitted it to KDE.org, but in the meantime, if you'd
like a copy, email me at :-
andrew.cool@no-spam.dsto.defence.gov.au

Cheers,

Andrew Cool
