Subject: self made color tables
Posted by gnarloo on Mon, 20 Sep 2004 17:37:48 GMT

hi dudes, i'm michael.

today is a rainy day and even the most stupid things can become a
problem..
does anyone know how to SAVE a self made color table?

i explain better..

i start xpalette and create a new color table.
when i shut it down this is loaded in a common block and i can use it
for the current session.
BUT if i want to define a color table that can be always used what do
i have to do ? there is no way with xpalette to save the color table
and load it at a later stage with , for example loadct, 77 (if i saved
it with the number 77)

presently i can do this but only by writing the rgb triplets and then
loading them with tvlct.

cheers
michael
