Hi, Guys

I really want to use multiple color tables at the same time. The tips from David Fanning's website is not very satisfying. The visual effect is really bad if I have to use 3 at the same time. The world is colorful, why should we always be limited to 256 colors?! Can any body suggest more elegant ways of having several colormaps in same application with 256 colors each?!

Thanks for reading this "old" topic.
