Subject: Multiple Color Tables!?
Posted by biophys on Thu, 16 Sep 2004 22:08:09 GMT

Hi, Guys

I really want to use multiple color tables at the same time. The tips
from David Fanning's website is not very satisfying. The visual effect
is really bad if I have to use 3 at the same time. The world is
colorful, why should we always be limited to 256 colors?! Can any body
suggest more elegant ways of having several colormaps in same
application with 256 colors each?!

Thanks for reading this "old" topic.
