| Subject: Can somebody explain this? Posted by sandrokan on Thu, 16 Sep 2004 12:11:18 GMT View Forum Message <> Reply to Message |
|---|
| (Sorry if it is a faw) I've spend days of dubbunging and then I've found that, on 5IDL.2: |
| IDL> a=intarr(4) |
| IDL> a(4)=1 |
| % Attempt to subscript A with <int (4)=""> is out of range.</int> |
| % Execution halted at: \$MAIN\$ |
| IDL> a([4])=1 |
| IDL> print, a(3) |
| 1 |
| |
| Isn't it strange? Maybe it is reported somewhere in some idl guide, but I still can't believe |
| it is real |
| |
